

043 Abacus colours and shapes I

Link geometric figures and colours

Starting Session

Hand out the Abacolor Maxi Miniland game, select the triangular prism, circle and cube to familiarise with these geometric figures. Search for differences and likeness between the figures (colours, shape ...) (Free play and/or conversation).

Miniland Product Game

Print one of the two sheets and colour the figures according to the colours we want to work with. Select the proposed Abacolor pieces and place them in the Abacolor using the coloured sheet as reference. We work the basic space notions such as up, down, on the side, colour names...

Digital Game

The aim of the game is to select the correct figure, keeping in mind its colour and shape. You would see a transparent piece on the abacus, then select a geometric figure (shape and colour); if right, the figure will position itself on the abacus. There are 15 figures to place on the abacus.

Educational content

Language

- Vocabulary.

Mathematics

- Mathematical-logic skills
- Colour identification
- Geometric shapes identification
- Space notions
- Count from 1 to 15

ICT

Use of a digital environment
