

044 Abacus colours and shapes II

Link geometric figures and colours

Starting Session

Hand out the Abacolor Maxi Miniland game to familiarise with it. Search for differences and likeness between the geometric figures. (Free play and/or conversation.)

Miniland Product Game

Print one of the two sheets and colour the figures according to the colours we want to work with. Select the proposed Abacolor pieces and place them in it using the coloured sheet as reference. We work the basic space notions such as up, down, on the side, colour names...

Digital Game

The aim of the game is to select the colour tin according to the coloured piece (transparency) shown in the abacus. Then, select the geometric figure and, if correct, it will place itself on the abacus. There have to be 15 pieces placed on the abacus.

Educational content

Language

- Vocabulary.

Mathematics

- Mathematical-logic skills
- Colour identification
- Geometric shapes identification
- Space notions
- Count from 1 to 15

ICT

Use of a digital environment

Compatible Miniland Material
