071 Miniland Dolls

Normalising social and functional diversity and identifying and learning body and face parts, in an environment respectful of difference.

Introducing the session

Start by explaining that all boys and all girls are different, and that differences make us unique and special. Talk about the physical differences between people, but also underline the aspects that all of us share. So, we all have two eyes, two ears, a head and so on, but we also all have little differences that make us special (glasses, dental braces, hair colour, etc.). The idea is to always emphasise diversity as an enriching and positive value, and encourage empathy and tolerance towards others.

Game with Miniland product

Worksheet nº1.1, 1.2, 1.3: Raising awareness of social and functional diversity and working on body parts. The sheet shows the shape/outline of a Miniland doll. Children are asked to draw, colour and, ultimately, create their own doll. The accessories and extras used in the digital game will be attached in two cut-outs and can be added to their drawing.

Worksheet nº2.1, 2.2, 2.3, 2.4 and 2.5: Working on facial features from a diversity point of view. Six different plates have been produced to reflect the diversity of Miniland dolls. On each of them the children can make a puzzle with the face of a different doll by cutting out, sorting and pasting each piece into place.

Digital game

The aim of the digital game is to raise children's awareness of the value of social diversity. To do this, we've come up with a set of different, original, unique and very, very special dolls. During the game, screens will appear in which children will be shown a range of options and asked to choose physical features (face, hair, eyes, nose and mouth), clothes, accessories and extras for their doll. When they're happy with the finished picture, they can save it, print it out or take a screenshot of it.
